XBRL**

ISCA Methodology

CaseWare Audit Singapore licenses content from ISCA (the Institute of Singapore Chartered Accountants), covering the complete ISCA Audit Manual for Standalone Entities (AMSE).

Integrated PBC System

Complete requests within the PBC system to create a secure, streamlined process where documents and responses are carried through to the engagement file.

Seamless Imports

Supports files from CaseWare Working Papers and Microsoft Excel, as well as 50+ desktop and online accounting packages.

REAL-TIME COLLABORATION

CaseWare Audit Singapore eliminates multiple communication channels and delayed approvals.

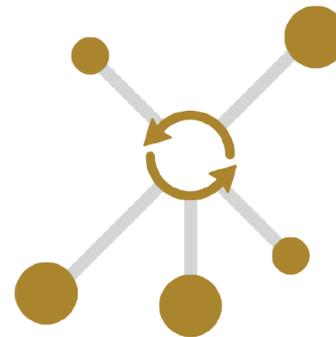

Streamline communication processes and collaborate in a secure location to:

- Eliminate the need for multiple email threads.
- Securely send, receive, and track communications in one location.
- Work simultaneously with colleagues on multiple devices, from anywhere.

INTEGRATED ANALYTICS

Audit Singapore comes with embedded Analytics, allowing you to include risk-based transaction analysis as an integral part of your audit, enhancing analytical review, risk assessment and substantive work, including journal testing.

- Transaction analysis performs multiple tests on the complete transaction set automatically and in the background.
- Bundled risk scoring provides the auditor with high risk transactions for further investigation.
- Configuration allows firms to translate their methodology into audit data analytics.
- Influencers and Filtering allow engagement teams to adjust the analytics results to the specifics of the engagement.
